Professional Summary

Biotechnology graduate with hands-on experience in molecular diagnostics, including multiplex PCR, RNA isolation, agarose gel electrophoresis, and nanoparticle synthesis through a 90-day internship at the Institute of Animal Health and Veterinary Biologicals (IAH&VB). Skilled in molecular biology techniques, laboratory instrumentation, and bioinformatics tools. Seeking opportunities in biotechnology molecular diagnostics, vaccine development, and life science research.

Education

Degree	University
Bachelor of Engineering (Biotechnology) 2022- 2026 CGPA: 8.05/10	Acharya Institute of Technology, Bengaluru Visvesvaraya Technological University

Skills

Molecular Biology

- Performed multiplex PCR on 30 clinical samples, RNA isolation, and agarose gel electrophoresis.
- Assisted in chitosan nanoparticle synthesis.
- Observed qPCR, ELISA, and SDS-PAGE techniques.

Bioinformatics & Computational Biology

Molecular Docking, Gene Expression Analysis , Machine Learning (Basics) , Python (Basics)

Laboratory Instruments

NanoDrop Spectrophotometer , Thermal Cycler , Gel Documentation System , Micropipettes , Centrifuge , Vortex Mixer , pH Meter

Software Skills

Microsoft Excel , Microsoft Word , PowerPoint , Python , AutoDock , PyMOL , SwissDock , Discovery Studio Visualizer, Chem Draw

Internship

Duration:4/02/2026-19/05/2026

Institute of Animal Health and Veterinary Biologicals (IAH&VB)

- Performed multiplex PCR (mPCR) on 30 clinical samples for pathogen detection and analyzed amplification results using agarose gel electrophoresis.
- Isolated and quantified RNA while maintaining RNase-free laboratory conditions.
- Prepared agarose gels, loaded PCR products, and interpreted electrophoresis band patterns.
- Assisted in the synthesis of chitosan nanoparticles through ionic gelation by preparing reagents and monitoring nanoparticle formation.
- Observed qPCR assay setup, amplification curve analysis, and data interpretation.
- Observed ELISA for antigen-antibody detection.
- Observed SDS-PAGE for protein separation and molecular weight analysis.

Projects

Classification of ALL and AML using Leukemia Gene Expression Microarray Data with Random Forest and SVM

- Analyzed leukemia gene expression datasets.
- Performed preprocessing and visualization.
- Built Random Forest and SVM models.

Evaluated classification performance.Harnessing Peepal Tree Bioactive Compounds for Managing Bacterial Soft Rot

Demonstrated antimicrobial potential of *Ficus religiosa* extracts against bacterial soft rot pathogens using in vitro, molecular docking and aiding sustainable plant-based biocontrol development.

Phytochemical-Based Inhibition of PCSK9 Using Coleus forskohlii

Studied PCSK9-mediated LDL receptor degradation and identified potential inhibitors from coleus forskohlii via molecular docking.

Certifications

- Computer Aided Drug Discovery – Edgene BioMed Pvt. Ltd.
- NPTEL – Food Science and Technology
- Data Science for Biologists – Biogrademy
- Generative AI with Microsoft 365 Copilot
- Ideathon – Sustainable Applications Using Algal Biotechnology

Additional Information

International Conference on Science and Technology for sustainable Future(ICSTSF)-IEEE

Community Development Program, Cleanathon, Teaching-Upkriti NGO.
